Client-side Development

By: Mosh Hamedani

Calling an API Using jQuery

```
$.ajax({
    url: "…",
    method: "…", // DELETE, POST, PUT, optional for GET
    success: function(result){

        …

    }
});
```

Bootbox

```
bootbox.confirm("Are you sure?", function(result){
    if (result) {
    }
});
```

DataTables - Zero Configuration

```
$("#customers").DataTable();
```

Client-side Development

By: Mosh Hamedani

DataTables - Ajax Source

```
$("#customers").DataTable({
    ajax: {
        url: "…",
        dataSrc: ""
    },
    columns: [
        { data: "name" },
        {
          data: "id",
          render: function(data, type, row){
              return "…";
          }
        }
    ]
});
```

DataTables - Removing Records

```
var table = $("…").DataTable(…);

var $tr = $("…");
table.rows(tr).remove().draw();
```
