

MANONMANIAM SUNDARANAR UNIVERISTY, TIRUNELVELI-12

SYLLABUS

(with effect from the academic year 2023-2024 onwards)

| Semester-IV | | | | | | | |
|-------------|-----------------------|--|-----------------|--------|--|--|--|
| Part | Subject Status | Subject Title | Subject Code | Credit | | | |
| 3 | Core | NUCLEAR AND PARTICLE PHYSICS | | 5 | | | |
| 3 | Core Practical- IV | ADVANCED PHYSICS EXPERIMENTS - II AND NUMERICAL METHODS IN C++ | | 4 | | | |
| 3 | ELECTIVE | ELECTROMAGNETIC THEORY | | 3 | | | |
| 3 | Core | PROJECT WITH VIVA VOCE | | 8 | | | |
| 3 | SEC - 3 | SOLAR ENERGY UTILIZATION | | 2 | | | |
| 3 | EXTENSION ACTIVITY | CHOOSE ANY ONE FROM LIST - I | | 1 | | | |

Total Marks: 100 Internal Exam: 25 marks + External Exam: 75 marks

A. Scheme for internal Assessment:

Maximum marks for written test: 15 marks

3 internal tests, each of **I hour** duration shall be conducted every semester.

To the average of the **best two** written examinations must be added the marks scored in. The **assignment** for 5 marks and Seminar for 5 marks

The break up for internal assessment shall be:

Written test- 15 marks; Assignment -5 marks; Seminar-5 Marks Total - 25 marks

B. Scheme of External Examination

3 hrs. examination at the end of the semester

A-Part: 1 mark question two - from each unit B-Part: 5 marks question one - from each unit C-Part: 8 marks question one - from each unit

> Conversion of Marks into Grade Points and Letter Grades

| S.No. | Percentage of Marks | Letter Grade | Grade Point | Performance |
|-------|---------------------|--------------|-------------|---------------|
| 1 | 90 - 100 | O+ | 10 | Outstanding |
| 2 | 80 - 89 | О | 9 | Excellent |
| 3 | 70 - 79 | A+ | 8 | Very Good |
| 4 | 60 - 69 | A | 7 | Good |
| 5 | 55 - 59 | B+ | 6 | Above Average |
| 6 | 50 - 54 | В | 5 | Pass |
| 7 | 0 - 49 | RA | = | ReAppear |
| 8 | Absent | AA | - | Absent |

Cumulative Grade Point Average (CGPA)

$$CGPA = \frac{\Sigma (GP \times C)}{\Sigma C}$$

- **GP** = Grade point, **C** = Credit
- CGPA is calculated only for Part-III courses
- CGPA for a semester is awarded on cumulative basis

> Classification

a) First Class with Distinction
 b) First Class
 c CGPA ≥ 7.5*
 c CGPA ≥ 6.0

c) Second Class : $CGPA \ge 5.0$ and < 6.0

d) Third Class : CGPA < 5.0

NUCLEAR AND PARTICLE PHYSICS

Learning Objectives

- Introduces students to the different models of the nucleus in a chronological order
- Imparts an in-depth knowledge on the nuclear force, experiments to study it and the types of nuclear reactions and their principles
- Provides students with details of nuclear decay with relevant theories
- Exposes students to the Standard Model of Elementary Particles and Higgs boson

UNIT I: NUCLEAR MODELS

Liquid drop model – Weizacker mass formula – Isobaric mass parabola –Mirror Pair - Bohr Wheeler theory of fission – shell model – spin-orbit coupling – magic numbers – angular momenta and parity of ground states – magnetic moment – Schmidt model – electric Quadrupole moment - Bohr and Mottelson collective model – rotational and vibrational bands.

UNIT II: NUCLEAR FORCES

Nucleon – nucleon interaction – Tensor forces – properties of nuclear forces – ground state of deuteron – Exchange Forces - Meson theory of nuclear forces – Yukawa potential – nucleon- nucleon scattering – effective range theory – spin dependence of nuclear forces - charge independence and charge symmetry – isospin formalism.

UNIT III: NUCLEAR REACTIONS

Kinds of nuclear reactions – Reaction kinematics – Q-value – Partial wave analysis of scattering and reaction cross section – scattering length – Compound nuclear reactions – Reciprocity theorem – Resonances – Breit Wigner one level formula – Direct reactions - Nuclear Chain reaction – four factor formula.

UNIT IV: NUCLEAR DECAY

Beta decay – Continuous Beta spectrum – Fermi theory of beta decay - Comparative Half-life – Fermi Kurie Plot – mass of neutrino – allowed and forbidden decay — neutrino physics – Helicity - Parity violation - Gamma decay – multipole radiations – Angular Correlation - internal conversion – nuclear isomerism – angular momentum and parity selection rules.

UNIT V: ELEMENTARY PARTICLES

Classification of Elementary Particles – Types of Interaction and conservation laws – Families of elementary particles – Isospin – Quantum Numbers – Strangeness –

Hypercharge and Quarks –SU (2) and SU (3) groups-Gell Mann matrices—Gell Mann Okuba Mass formula- Quark Model. Standard model of particle physics – Higgs boson.

UNIT VI: PROFESSIONAL COMPONENTS

Expert Lectures, Online Seminars - Webinars on Industrial Interactions/Visits, Competitive Examinations, Employable and Communication Skill Enhancement, Social Accountability and Patriotism

ELECTROMAGNETIC THEORY

Learning Objectives

- To acquire knowledge about boundary conditions between two media and the technique of method of separation of variables
- To understand Biot Savart's law and Ampere's circuital law
- To comprehend the physical ideas contained in Maxwell's equations, Coulomb & Lorentz gauges, conservation laws
- To assimilate the concepts of propagation, polarization, reflection and refraction of electromagnetic waves
- To grasp the concept of plasma as the fourth state of matter

UNIT I: ELECTROSTATICS

Boundary value problems and Laplace equation – Boundary conditions and uniqueness theorem – Laplace equation in three dimension – Solution in Cartesian and spherical polar coordinates – Examples of solutions for boundary value problems. Polarization and displacement vectors - Boundary conditions - Dielectric sphere in a uniform field – Molecular polarizability and electrical susceptibility – Electrostatic energy in the presence of dielectric – Multipole expansion.

UNIT II: MAGNETO STATICS

Biot-Savart's Law - Ampere's law - Magnetic vector potential and magnetic field of a localized current distribution - Magnetic moment, force and torque on a current distribution in an external field - Magneto static energy - Magnetic induction and magnetic field in macroscopic media - Boundary conditions - Uniformly magnetized sphere.

UNIT III: MAXWELL EQUATIONS

Faraday's laws of Induction - Maxwell's displacement current - Maxwell's equations - Vector and scalar potentials - Gauge invariance - Wave equation and plane wave solution- Coulomb and Lorentz gauges - Energy and momentum of the field - Poynting's theorem - Lorentz force - Conservation laws for a system of charges and electromagnetic fields.

UNIT IV: WAVE PROPAGATION

Plane waves in non-conducting media - Linear and circular polarization, reflection and refraction at a plane interface - Waves in a conducting medium - Propagation of waves in a rectangular wave guide. Inhomogeneous wave equation and retarded potentials - Radiation from a localized source - Oscillating electric dipole

UNIT V: ELEMENTARY PLASMA PHYSICS

The Boltzmann Equation - Simplified magneto-hydrodynamic equations - Electron plasma oscillations - The Debye shielding problem - Plasma confinement in a

magnetic field - Magneto- hydrodynamic waves - Alfven waves and magneto sonic waves.

UNIT VI: PROFESSIONAL COMPONENTS

Practical – IV: ADVANCED PHYSICS EXPERIMENTS – II AND NUMERICAL METHODS IN C++

Learning Objectives

• To apply theoretical knowledge through hands-on experiments in order to analyze and understand the characteristics and behaviors of various physical and electronic systems, while developing practical skills in measurement, data analysis, and circuit design.

• To familiarize the students with numerical methods used in problem-solving by writing programs using the high level language C++

Advanced Physics Experiments – II and Numerical Methods in C++ Section A: Advanced Physics Experiments – II (Any 6 Experiments)

- 1. Investigate the equilibrium points of the logistic map equation Xn+1 = aXn (1-Xn) for various parameter values and initial conditions:
 - a) Determine the equilibrium points for 'a' ranging from 0.5 to 2.5 with a step size of 0.1 considering x0=0.1.
 - b) Explore the behavior of the logistic map for 'a' values between 3.5 and 4.0 with a step size of 0.05 for x0=0.2.
 - c) Analyze the dynamics near the period-doubling bifurcation point at $a\approx3.828$, considering x0=0.3.
 - d) Plot xn versus n for each scenario and generate bifurcation diagrams to visualize the system's behavior.
- 2. Determination of resistivity of a semiconductor by Four Probe Method.
- 3. Examine the input-output characteristics of an ADC or DAC IC (0800 series). The characteristics may include parameters such as linearity, accuracy, resolution and dynamic range.
- 4. Photo Conductivity Experiment:
 - a) To plot the current-voltage characteristics of a CdS Photo Resistor (LDR) at constant irradiance.
 - b) To measure the Photo current as a function of irradiance at constant voltage
- 5. Determination of the distance between two tracks of a CD and a DVD using a Solid state laser
- 6. Verification of Thevenin's and Max power theorems
- 7. Study the Characteristics of a Load cell
- 8. Design of a Serial Shift Registers using necessary Flip-Flop ICs
- 9. Design of Encoder and Decoder Circuits using necessary ICs
- 10. Study of a quartz crystal (1 MHz) and construction of a Pierce crystal Oscillator using digital inverters
- 11. UV spectral data analysis for the given spectrum
- 12. Simulation of satellite orbit around the earth using the universal law of gravitation in Scilab

Section – B : Numerical Methods in C++ (Any SIX programs with Algorithm and Flow chart)

- 1. Algebraic and Transcendental equation.
 - a) Solution of the given equations using Newton Raphson Method manual calculation.
 - b) C++ program to find the solution using N-R method and verification.

- 2. Algebraic and Transcendental equations.
 - a) Solution of the given equations using Bisection Method manual calculation.
 - b) C++ program to find the solution using Bisection method and verification.
- 3. Curve Fitting Linear Fit
 - a) Principle of least square and fitting a straight line.
 - b) C++ program to fit a straight line using the given data related with any physics experiment.
- 4. Curve Fitting Non Linear Fit
 - a) Principle of fitting a second degree polynomial using method of least square
 - b) C++ program to fit a polynomial using the given data related with any physics experiment.
- 5. Interpolation
 - a) Derive Lagrangian interpolation formula.
 - b) C++ program to interpolate using the given data related with any physics experiment by Lagrangian Method.
- 6. Solution of simultaneous equations -Gauss Elimination method.
 - a) Procedure to solve Simultaneous equations using Gauss Elimination (GE) Method
 - b) C++ program for solving unknown branch currents in Wheatstone's bridge using GE method.
- 7. Numerical solution of ordinary Differential Equations.
 - a) Derivation of Exponential law of Radioactive decay.
 - b) RK 4th order method of solving a given 1st order differential equation.
 - c) C++ program using RK method to solve radioactive problem Compare output with the analytical result.
- 8. Area under the Curve Numerical integration
 - a) Derivation of Trapezoidal and Simpson's rule
 - b) C++ programs for Trapezoidal and Simpson 1/3 rule
 - c) Comparison of the program output with direct integration.
- 9. Random Number Generation and Montecarlo Method
 - a) Generate and scale the random numbers for the desired range using the C++ library functions.
 - b) Evaluate the given integral using Montecarlo method.
- 10. Matrix Multiplication
 - a) Multiplication of two given matrices
 - b) Rotation matrix definition.
 - c) C++ program to rotate the given 2D- object about the origin using

rotation matrix through the given angle.

11. Inverse of a Matrix

- a) Procedure to determine the Inverse of a Matrix using Gauss elimination Method.
- b) C++ Program to find the Inverse of a Matrix using Gauss Elimination Method.

12. Numerical Differentiation

- a) Numerical differentiation related to any physical problem
- b) Derivation of Newton's law of cooling –equation
- c) C++ program to verify the Newton's law of cooling from the given experimental data.

SOLAR ENERGY UTILIZATION

Learning Objectives

- To impart fundamental aspects of solar energy utilization.
- To give adequate exposure to solar energy related industries
- To harness entrepreneurship skills
- To understand the different types of solar cells and channelizing them to the different sectors of society
- To develop an industrialist mindset by utilizing renewable source of energy

UNIT I

HEAT TRANSFER & RADIATION ANALYSIS

Introduction to sun and solar energy – Conduction, Convection and Radiation – Solar Radiation at the earth's surface – Earth radiation budget- Determination of solar time – Solar energy measuring methods and instruments- Analysis of Solar insolation.

UNIT II

SOLAR COLLECTORS

Physical principles of conversion of solar radiation into heat flat plate collectors - General characteristics – Focusing collector systems – Thermal performance evaluation of optical loss.

UNIT III

SOLAR HEATERS

Types of solar water heater - Solar heating system - Collectors and storage tanks - Solar ponds - Solar cooling systems - Design and cost estimation of a solar thermal system (Load analysis, system design, component list, price break down)

UNIT IV

SOLAR ENERGY CONVERSION

Photo Voltaic principles – Types of solar cells – Crystalline silicon/amorphous silicon

and Thermo - electric conversion - process flow of silicon solar cells- different approaches on the process- texturization, diffusion, Antireflective coatings, metallization-Emerging solar cell technologies.

UNIT V

NANOMATERIALS IN FUEL CELL APPLICATIONS

Use of nanostructures and nanomaterial in fuel cell technology - high and low temperature fuel cells, cathode and anode reactions, fuel cell catalysts, electrolytes, ceramic catalysts. Use of Nano technology in hydrogen production and storage.

Industrial visit – data collection and analysis - presentation
