

MANONMANIAM SUNDARANAR UNIVERISTY, TIRUNELVELI-12 SYLLABUS PG - COURSES – AFFILIATED COLLEGES

Course Structure for M. Sc. Physics (Choice Based Credit System)

(with effect from the academic year 2024-2025 onwards)

Semester-II								
Part	Subject Status	Subject Title	Subject Code	Credit				
3	Core	STATISTICAL MECHANICS	VPHC21	5				
3	Core	QUANTUM MECHANICS - I	VPHC22	5				
3	PRACTICAL II	PRACTICAL – II GENERAL PHYSICS AND ELECTRONICS EXPERIMENTS – II	VPHL21	4				
3	DISCIPLINE CENTRIC ELECTIVE- II	ADVANCED OPTICS/ NON LINEAR DYNAMICS/ PHYSICS OF NANO SCIENCE AND TECHNOLOGY	VPHE21/ VPHE22/ VPHE23	3				
3	GENERIC ELECTIVE -II	MICROPROCESSOR 8085 AND MICROCONTROLLER 8051/ MATERIAL SCIENCE/ CHARACTERIZATION OF MATERIALS	VPHE24/ VPHE25/ VPHE26	3				
3	SEC I	PHYSICS FOR COMPETITIVE EXAMINATIONS	VPHSE21	2				

Total Marks: 100 Internal Exam: 25 marks + External Exam: 75 marks

A. Scheme for internal Assessment:

Maximum marks for written test: 15 marks 3 internal tests, each of I hour duration shall be conducted every semester. To the average of the best two written examinations must be added the marks scored in. The assignment for 5 marks and Seminar for 5 marks

The break up for internal assessment shall be: Written test- 15 marks; Assignment -5 marks; Seminar-5 Marks Total - 25 marks

B. Scheme of External Examination

3 hrs. examination at the end of the semester

- A Part : 1 mark question two from each unit
- B Part: 5 marks question one from each unit
- C Part: 8 marks question one from each unit

Conversion of Marks into Grade Points and Letter Grades

S.No.	Percentage of Marks	Letter Grade	Grade Point	Performance
1	90 - 100	0+	10	Outstanding
2	80 - 89	0	9	Excellent
3	70 - 79	A+	8	Very Good
4	60 - 69	А	7	Good
5	55 - 59	B+	6	Above Average
6	50 - 54	В	5	Pass
7	0 - 49	RA	-	ReAppear
8	Absent	AA	-	Absent

<u>Cumulative Grade Point Average (CGPA)</u>

$CGPA = \frac{\Sigma (GP \times C)}{\Sigma C}$

- **GP** = Grade point, **C** = Credit
- CGPA is calculated only for Part-III courses
- CGPA for a semester is awarded on cumulative basis

\succ Classification

a) First Class with Distinction	: CGPA \geq 7.5*
b) First Class	: CGPA ≥ 6.0

c) Second Class

: CGPA ≥ 6.0

- : CGPA \geq 5.0 and \leq 6.0
- d) Third Class : CGPA< 5.0

STATISTICAL MECHANICS

Learning Objectives

- To acquire the knowledge of thermodynamic potentials and to understand phase transition in thermodynamics
- To identify the relationship between statistic and thermodynamic quantities
- To comprehend the concept of partition function, canonical and grand canonical ensembles
- To grasp the fundamental knowledge about the three types of statistics
- To get in depth knowledge about phase transitions and fluctuation of thermodynamic properties that vary with time

UNIT I

THERMODYNAMICS AND PHASE TRANSITIONS

Thermodynamic potentials and the reciprocity relations - Thermodynamic Equilibrium - Gibb's phase rule - Third law of Thermodynamics - Phase transitions of first and second kind – Critical exponent - Phase Transitions of the second kind: The Ising model – Bragg-Williams approximation - One dimensional Ising model.

UNIT II

STATISTICAL MECHANICS

Introduction to statistical mechanics - Phase space – Ensembles and their types – Liouville's theorem – Postulate of equal priori probability – Microstates and macrostates – Stirling's formula – The most probable distribution – Law of equipartition of energy - Entropy and probability – Probability distribution and entropy of a two level system - Negative temperature.

UNIT III

MICRO CANONICAL AND GRAND CANONICAL ENSEMBLES

Microcanonical ensemble (Isolated system) – Perfect gas in Microcanonical ensemble – Gibbs paradox – Partition function and its correlation with thermodynamic quantities - Grand canonical ensemble (system with an infinite number of particles) – Partition function and thermodynamic functions for Grand canonical ensemble – Perfect gas in Grand canonical ensemble – Applications: Mean kinetic energy of a molecule in a gas, Brownian motion and Harmonic oscillator.

UNIT IV

CLASSICAL AND QUANTUM STATISTICS

Density matrix - Density matrix in micro canonical, canonical and grand canonical ensembles - Bose-Einstein statistics - Maxwell-Boltzmann statistics - Fermi-Dirac statistics - Black-body radiation and the -Plank radiation law - Bose-Einstein gas - Bose-Einstein condensation - Fermi-Dirac gas.

UNIT V

LOW TEMPERATURE, ISINGMODELAND FLUCTUATIONS

Production of Low Temperature – Measurement of Low temperature – Approach to absolute zero by adiabatic demagnetization : Principle, Method, Theory and T-S diagram – Conversion of magnetic temperature to Kelvin temperature - Fluctuations and transport phenomena – Brownian movement –Motion due to fluctuating force: The Fokker - Planck equation – Fluctuation in energy and pressure

TEXT BOOKS

- 1. Dr. S. L. Gupta and Dr. V. Kumar, 2008, ElementaryStatistical Mechanics, 22nd Edition, PragatiPrakashan, Meerut.

QUANTUM MECHANICS

Learning Objectives

- To develop the physical principles and the mathematical background important to quantum mechanical descriptions.
- To describe the propagation of a particle in a simple, one-dimensional potential.
- To formulate and solve the Schrodinger's equation to obtain eigenvectors and energies for particle in a three-dimensional potential.
- To explain the mathematical formalism and the significance of constants of motion, and see their relation to fundamental symmetries in nature
- To discuss the Approximation methods like perturbation theory, Variational and WKB methods for solving the Schrödinger equation.

UNIT I

BASIC FORMALISM

Wave Mechanical Concepts: Wave packet - Time dependent Schrodinger equation – Interpretation of the wave function –Ehrenfest's theorem- Time independent Schrodinger equation - Stationary states — Linear vector space – Linear operator – Eigen functions and Eigen Values – Hermitian Operator – Postulates of Quantum Mechanics – Simultaneous measurability of observables – General Uncertainty relation.

UNIT II

GENERAL FORMALISM

Dirac notation – Equations of motions – Schrodinger representation –Heisenberg representation – Interaction representation –Momentum representation – Symmetries and conservation laws: Conservation of linear momentum, Energy and Angular momentum – Parity conservation and time reversal.

UNIT III

ONE DIMENSIONAL AND THREEDIMENSIONAL ENERGY EIGEN VALUE PROBLEMS

Square – well potential with rigid walls – Square well potential with finite walls – Square potential barrier – Alpha emission – Bloch waves in a periodic potential – Kronig-Penny square – well periodic potential – Linear harmonic oscillator: Operator method – Particle moving in a spherically symmetric potential – System of two interacting particles –Rigid rotator– Hydrogen atom.

UNIT IV

APPROXIMATION METHODS

Time independent perturbation theory: Non-degenerate energy levels – Ground state of Helium atom – First order Stark effect in Hydrogen atom – Degenerate

energy levels - Excited state of Hydrogen atom – WKB approximation – Connection formulae (no derivation) –Application of WKB method: Barrier penetration – Alpha emission.

UNIT V

ANGULAR MOMENTUM

The Eigenvalue spectrum– Ladder operators– Matrix representation of J – Spin angular momentum – Addition of angular momenta – CG Coefficients – Angular momentum commutation relations – Eigen values of J2 and Jz - Spin angular momentum - Pauli's exclusion principle.

PRACTICAL II - GENERAL PHYSICS AND ELECTRONICS EXPERIMENTS – II

Learning Objectives

- To understand the concept of mechanical behavior of materials and calculation of same using appropriate equations.
- To calculate the thermodynamic quantities and physical properties of materials.
- To analyze the optical and electrical properties of materials.
- To observe the applications of FET and UJT.
- To study the different applications of operational amplifier circuits.
- To learn about Combinational Logic Circuits and Sequential Logic Circuits

PRACTICAL I

(Choose any SIX experiments from Part A and SIX from Part B)

PART A General Physics Experiments -II

- 1. Determination of Young's modulus and Poisson's ratio by Elliptical fringes Cornu's Method
- 2. Study the beam divergence, spot size and intensity profile of Diode/He-Ne laser.
- 3. B-H curve Formation and tracing magnetic hysteresis loop and determination of energy loss for the given specimen.
- 4. Measurement of Magnetic Susceptibility by Guoy's method
- 5. Formation of acoustic grating in a given liquid and determination of velocity of ultrasonic wave in the liquid and compressibility of liquid. (Ultrasonic diffraction)
- 6. Determination of Thickness of thin film using Michelson Interferometer
- 7. Determination of Refractive index of liquids using diode Laser/ He Ne Laser
- 8. Determination of Numerical Apertures and Acceptance angle, attenuation of optical fibers
- 9. Equipotential lines and electric field mapping for electrodes of different shapes.
- 10. Determination of Mutual Inductance and coefficient of coupling for the given pair of coils using Heaviside Bridge method
- 11. Hall Effect determination of Hall coefficient, carrier concentration and mobility
- 12. Temperature coefficient of a thermistor using Carry Foster Bridge.

PART B Electronics Experiments -II

- 1. Determination of V-I Characteristics and efficiency of solar cell.
- 2. Construction of a relaxation oscillator using UJT, measuring the frequency of oscillation for different RC values and comparing it with the theoretical value.

- Modulus counter using IC 7490 and seven segment display using IC 7447 / IC 7448
- 4. Solving simultaneous equations using IC 741 / IC LM324
- 5. Study of Op-Amp –Active filters: Low pass, High pass and Band pass filters
- Construction of Current to Voltage and Voltage to Current Convertor using IC 741
- 7. Construction of square wave generator using IC 555 and VCO using 555
- 8. Code Conversion: BCD to Excess- 3 and Excess 3 to BCD

Binary to Gray and Gray to Binary

- 9. Study of Binary Ripple Counter using IC 74393 and LEDs
- 10. Study of RS, Clocked RS and D Flip-Flops.
- 11. Construction of Shift register and Ring counter using IC 7476 /IC 7474
- 12. Construction of Schmitt trigger circuit using IC555 for a given hysteresis Application as squarer

TEXT BOOKS

- 1. Practical Physics, Gupta and Kumar, Pragati Prakasan
- 2. Kit Developed for doing experiments in Physics- Instruction manual, R.Srinivasan K.R Priolkar, Indian Academy of Sciences
- 3. Op-Amp and linear integrated circuit, Ramakanth A Gaykwad, Eastern Economy Edition.
- 4. Electronic lab manual Vol I, K ANavas, Rajath Publishing
- 5. Electronic lab manual Vol II, K ANavas, PHI eastern Economy Edition

REFERENCE BOOKS

- 1. An advanced course in Practical Physics, D.Chattopadhayay, C.R Rakshit, New Central Book Agency Pvt. Ltd
- 2. Advanced Practical Physics, S.P Singh, PragatiPrakasan
- 3. A course on experiment with He-Ne Laser, R.S. Sirohi, John Wiley & Sons (Asia) Pvt.ltd
- 4. Electronic lab manual Vol II, Kuriachan T.D, Syam Mohan, Ayodhya Publishing
- 5. Electronic Laboratory Primer a design approach, S. Poornachandra, B.Sasikala, Wheeler Publishing, New Delhi

ADVANCED OPTICS

Learning Objectives

- To know the concepts behind polarization and could pursue research work on application aspects of laser
- To impart an extensive understanding of fiber and non-linear optics
- To study the working of different types of LASERS
- To differentiate first and second harmonic generation
- Learn the principles of magneto-optic and electro-optic effects and its applications

UNIT 1 POLARIZATION AND DOUBLE REFRACTION

Classification of polarization – Transverse character of light waves –

Polarizer and analyzer – Malu's law – Production of polarized light –

Wire grid polarizer and the polaroid – Polarization by reflection – Polarization by double refraction – Polarization by scattering – The phenomenon of double refraction – Normal and oblique incidence – Interference of polarized light: Quarter and half wave plates – Analysis of polarized light – Optical activity

UNIT II

LASERS

Basic principles – Spontaneous and stimulated emissions – Components of the laser – Resonator and lasing action – Types of lasers and its applications – Solid state lasers – Ruby laser – Nd:YAG laser – gas lasers – He-Ne laser – CO2 laser – Chemical lasers – HCl laser – Semiconductor laser

UNIT III FIBER OPTICS

Introduction – Total internal reflection – The optical fiber – Glass fibers – The coherent bundle – The numerical aperture – Attenuation in optical fibers – Single and multi-mode fibers – Pulse dispersion in multimode optical fibers – Ray dispersion in multimode step index fibers – Parabolicindex fibers – Fiber-optic sensors: precision displacement sensor – Precision vibration sensor

UNIT IV

NON-LINEAR OPTICS

Basic principles – Harmonic generation – Second harmonic generation – Phase matching – Third harmonic generation – Optical mixing – Parametric generation of light – Self-focusing of light

UNIT V

MAGNETO-OPTICS AND ELECTRO-OPTICS

Magneto-optical effects – Zeeman effect – Inverse Zeeman effect – Faraday effect – Voigt effect – Cotton-mouton effect – Kerr magneto optic effect – Electro-optical effects – Stark effect – Inverse stark effect – Electric double refraction – Kerr electrooptic effect – Pockels electro optic effect

TEXT BOOKS

NON LINEAR DYNAMICS

Learning Objectives

- To school the students about the analytical and numerical techniques of nonlinear dynamics.
- To make the students understand the concepts of various coherent structures.
- To train the students on bifurcations and onset of chaos.
- To educate the students about the theory of chaos and its characterization.
- To make the students aware of the applications of solitons, chaos and fractals.

UNIT I

GENERAL

Linear waves-ordinary differential equations(ODEs)-Partial differential equations(PDEs)- Methods to solve ODEs and PDEs.- Numerical methods – Linear and Nonlinear oscillators-Nonlinear waves-Qualitative features

UNIT II

COHERENT STRUCTURES

Linear and Nonlinear dispersive waves - Solitons – KdB equation – Basic theory of KdB equation –Ubiquitous soliton equations – AKNS Method, Backlund transformation, Hirotabilinearization method, Painleve analysis - Perturbation methods- Solitons in Optical fibres - Applications.

UNIT III

BIFURCATIONS AND ONSET OF CHAOS

One dimensional flows – Two dimensional flows – Phase plane – Limit cycles – Simple bifurcations – Discrete Dinamical system – Strange attractors – Routes to chaos.

UNIT IV

FRACTALS

Self-similarity - Properties and examples of fractals - Fractal dimension - Construction and properties of some fractals - Middle one third cantor set - Koch curve - Sierpinski triangle – Julia set – Mandelbrot set - Applications of fractals.

UNIT V

APPLICATIONS

Soliton based communication systems – Solition based computation – Synchronization of chaos – Chaos based communication – Cryptography – Image processing – Stochastic – Resonance – Chaos based computation – Time Series analysis.

PHYSICS OF NANO SCIENCE AND TECHNOLOGY

Learning Objectives

- Physics of Nanoscience and Technology is concerned with the study, creation, manipulation and applications at nanometer scale.
- To provide the basic knowledge about nanoscience and technology.
- To learn the structures and properties of nanomaterials.
- To acquire the knowledge about synthesis methods and characterization techniques and its applications.

UNIT I

FUNDAMENTALS OF NANOSCIENCE AND TECHNOLOGY

Fundamentals of NANO – Historical Perspective on Nanomaterial and Nanotechnology – Classification of Nanomaterials – Metal and Semiconductor Nanomaterials - 2D, 1D, 0D nanostructured materials - Quantum dots – Quantum wires – Quantum wells - Surface effects of nanomaterials.

UNIT II

PROPERTIES OF NANOMATERIALS

Physical properties of Nanomaterials: Melting points, specific heat capacity, and lattice constant - Mechanical behavior: Elastic properties – strength - ductility - superplastic behavior - Optical properties: - Surface Plasmon Resonance – Quantum size effects - Electrical properties - Conductivity, Ferroelectrics and dielectrics - Magnetic properties – super para magnetism – Diluted magnetic semiconductor (DMS).

UNIT III

SYNTHESIS AND FABRICATION

Physical vapour deposition - Chemical vapour deposition - sol-gel – Wet deposition techniques - electrochemical deposition method – Plasma arching - Electrospinning method - ball milling technique - pulsed laser deposition - Nanolithography: photolithography – Nanomanipulator.

UNIT IV

CHARACTERIZATION TECHNIQUES

Powder X-ray diffraction – X-ray photoelectron spectroscopy (XPS) - UV-visible spectroscopy – Photoluminescence - Scanning electron microscopy (SEM) -Transmission electron microscopy (TEM) - Scanning probe microscopy (SPM) -Scanning tunneling microscopy (STM) – Vibrating sample Magnetometer.

UNIT V

APPLICATIONS OF NANOMATERIALS

Sensors: Nanosensors based on optical and physical properties - Electrochemical

sensors – Nano-biosensors. Nano Electronics: Nanobots - display screens - GMR read/write heads - Carbon Nanotube Emitters – Photocatalytic application: Air purification, water purification -Medicine: Imaging of cancer cells – biological tags - drug delivery - photodynamic therapy - Energy: fuel cells - rechargeable batteries - supercapacitors - photovoltaics.

MICROPROCESSOR 8085 AND MICROCONTROLLER 8051

Learning Objectives

- To provide an understanding of the architecture and functioning of microprocessor 8085A and to the methods of interfacing I/O devices and memory to microprocessor
- To introduce 8085A programming and applications and the architecture and instruction sets of microcontroller 8051

UNIT I

8085 ARCHITECTURE AND PROGRAMMING

Functional Building Blocks of a Processor - 8085 Pinout - Hardware Architecture, Bus structure- Memory organization - data transfer concepts–Interrupts- Instruction set- Addressing Modes-Assembly Language Programs- subroutines- Timing Diagrams.

UNIT II

MEMORY I/O PERIPHERAL DEVICES INTERFACING AND APPLICATIONS

Memory Interface – memory mapped I/O & I/O mapped I/O- Generating Control Signals – Interfacing 2KX8 EPROM – 2KX8 RAM -Interfacing I/O ports to 8085-Hand shake signals - PPI8255- Interfacing 8255 to 8085-LED Interface- seven segment display interface - Programmable DMA controller- Programmable counter /interval timer.

UNIT III

8051 MICROCONTROLLER

Introduction – Features of 8051 - Pin-out of 8051- architecture - PSW and Flag Bits, Register Banks and Stack, IO Ports Usage - Special Function Registers and their uses -Interrupt Structure-Interrupt Enable Register in 8051-Interrupt Priority Register in 8051- Software Generated Interrupts Register -Internal memory (RAM & ROM) Organization-External Memory.

UNIT IV

8051 INSTRUCTION SET AND ASSEMBLY LANGUAGE PROGRAMMING

Instruction Set and Addressing modes: Data transfer instructions - Instructions to Access external data memory, external ROM / program memory, PUSH and POP instructions, Data exchange instructions – Logical instructions: byte and bit level logical operations, Rotate and swap operations – Arithmetic instructions: Flags, Incrementing and decrementing, Addition, Subtraction, Multiplication and division, Decimal arithmetic - Jump and CALL instructions: Types of Jumps - Subroutines - Assembly Language Programming.

UNIT V

8051 INTERFACING APPLICATIONS

Basics of Data acquisition systems – Sensors and Transducers – examples-Multiplexed Seven segment display interface – Wave form generation by interfacing DAC – Interfacing ADC –Stepper motor interface - Measurement of electrical quantities (voltage and current) – Measurement of Temperature and Strain - Interrupt programming and serial communication with 8051.

MATERIALS SCIENCE

Learning Objectives

- To gain knowledge on optoelectronic materials
- To learn about ceramic processing and advanced ceramics
- To understand the processing and applications of polymeric materials
- To gain knowledge on the fabrication of composite materials
- To learn about shape memory alloys, metallic glasses and nanomaterials

UNIT I

OPTOELECTRONIC MATERIALS

Importance of optical materials – properties: Band gap and lattice matching – optical absorption and emission – charge injection, quasi- Fermi levels and recombination – optical absorption, loss and gain. Optical processes in quantum structures: Inter-band and intra-band transitions Organic semiconductors. Light propagation in materials – Electro-optic effect and modulation, electro-absorption modulation – exciton quenching.

UNIT II

CERAMIC MATERIALS

Ceramic processing: powder processing, milling and sintering – structural ceramics: zirconia, almina, silicon carbide, tungsten carbide – electronic ceramics – refractories – glass and glass ceramics

UNIT III

POLYMERIC MATERIALS

Polymers and copolymers – molecular weight measurement – synthesis: chain growth polymerization – polymerization techniques – glass transition temperature and its measurement – viscoelasticity – polymer processing techniques – applications: conducting polymers, biopolymers and high temperature polymers

UNIT IV

COMPOSITE MATERIALS

Particle reinforced composites – fiber reinforced composites – mechanical behavior – fabrication methods of polymer matrix composites and metal matrix composites – carbon/carbon composites:fabrication and applications.

UNIT V NEW MATERIALS

Shape memory alloys: mechanisms of one-way and two-way shape memory effect, reverse transformation, thermo-elasticity and pseudoelasticity, examples and

applications -bulk metallic glass: criteria for glass formation and stability, examples and mechanical behavior - nanomaterials: classification, size effect on structural and functional properties, processing and properties of Nano crystalline materials, single walled and multi walled carbon nanotubes

CHARACTERIZATON OF MATERIALS

Learning Objectives

- To make the students learn some important thermal analysis techniques namely TGA, DTA, DSC and TMA.
- To make the students understand the theory of image formation in an optical microscope and to introduce other specialized microscopic techniques.
- To make the students learn and understand the principle of working of electron microscopes and scanning probe microscopes.

- To make the students understand some important electrical and optical characterization techniques for semiconducting materials.
- To introduce the students the basics of x-ray diffraction techniques and some important spectroscopic techniques.

UNIT I

THERMAL ANALYSIS

Introduction – thermogravimetric analysis (TGA) – instrumentation – determination of weight loss and decomposition products – differential thermal analysis (DTA)-cooling curves – differential scanning calorimetry (DSC) – instrumentation – specific heat capacity measurements – determination of thermomechanical parameters.

UNIT II

MICROSCOPIC METHODS

Optical Microscopy: optical microscopy techniques – Bright field optical microscopy – Dark field optical microscopy – Dispersion staining microscopy - phase contrast microscopy –differential interference contrast microscopy - fluorescence microscopy confocal microscopy - digital holographic microscopy - oil immersion objectives quantitative metallography - image analyzer.

UNIT III ELECTRON

MICROSCOPY AND SCANNING PROBE MICROSCOPY

SEM, EDAX, EPMA, TEM: working principle and Instrumentation – sample preparation –Data collection, processing and analysis- Scanning tunnelingmicroscopy (STEM) - Atomic force microscopy (AFM) - Scanning new field optical microscopy.

UNIT IV

ELECTRICAL METHODS AND OPTICAL CHARACTERISATION

Two probe and four probe methods- van der Pauw method – Hall probe and measurement – scattering mechanism – C-V characteristics – Schottky barrier capacitance – impurity concentration – electrochemical C-V profiling – limitations. Photoluminescence – light – matter interaction – instrumentation – electroluminescence – instrumentation – Applications.

UNIT V

X-RAY AND SPECTROSCOPIC METHODS

Principles and instrumentation for UV-Vis-IR, FTIR spectroscopy, Raman spectroscopy, ESR, NMR, NQR, XPS, AES and SIMSproton induced X-ray Emission spectroscopy (PIXE) –Rutherford Back Scattering (RBS) analysis-application - Powder diffraction -

Powder diffractometer -interpretation of diffraction patterns - indexing - phase

identification - residual stress analysis - Particle size, texture studies - X-ray fluorescence spectroscopy - uses.

PHYSICS FOR COMPETITIVE EXAMINATIONS

Learning Objectives

- To develop the basics of physical principles and the mathematical background important to general mechanics and properties of matter.
- To recollect the ideas of heat and thermodynamics
- Formulation of the concepts of reflection, refraction in optics and longitudinal, transverse waves in sound.
- To explain the formalism of electricity and magnetism
- To discuss the concepts in modern physics.

UNIT I:

GENERAL MECHANICS AND PROPERTIES OF MATTER

Physical quantities - SI system of units - dimensions - scalars and vectors (Concepts) -Newton's equations of motion - impulse - principle of conservation of linear momentum - projectile motion - Kepler's laws - Newton's law of gravitation acceleration due to gravity - escape velocity - angular momentum - banking of roads simple harmonic motion – viscosity - surface Tension.

UNIT II:

HEAT AND THERMODYNAMICS

Different scales of temperatures - thermal expansions - calorimetry - specific heat - latent heat - triple point - transmission of heat – heat conductivity - Black body radiation - Stefan Boltzmann law - Wien's displacement law - Gas equation - Boyle's law - Charle's law - Law of equipartition of energy.

UNIT III: LIGHT AND SOUND

Reflection and refraction - Snell's law - total internal reflection - polarization -Brewster's Law - Huygen's principle – Young's double slit interference and single slit diffraction - longitudinal and transverse waves - velocity of sound - Newton's formula, Laplace correction, effects of pressure - beats - laws of vibrating strings open and closed organ pipes - resonance.

UNIT IV:

ELECTRICITY AND MAGNETISM

Coulomb's Law - Electric field due to charged particles: a point charge, a dipole, a line of charge - electric flux - Gauss' law and applications – Biot - Savart law, magnetic field due to a current in: a long straight wire, a circular arc of wire - Ampere's Law - magnetic field outside and inside a long straight wire - solenoids and toroids - Faraday's laws and Lenz's law

UNIT V: MODERN PHYSICS

Postulates of Einstein's theory of relativity - Galilean and Lorentz transformation - time dilation - length contraction - Planck's radiation - photoelectric effect - Compton shift, matter waves - Bohr's atomic theory. Nuclear properties - binding energy and mass defect -radioactive decay - alpha decay, beta decay and gamma decay - Radioactive dating.

TEXT BOOKS

1. J.Walker, D. Halliday, R. Resnick, Fundamentals of Physics, 10th Edition, Wiley, United states of America, 2007.

Nesamony Memorial Christian College, Marthandam

- 2. H.C Verma, Concept of Physics, (Volume I), 1st Edition, Bharati Bhawan Publishers & Distributors, New Delhi, 2008.
- 3. H.C Verma, Concept of Physics, (Volume II), 1st Edition, Bharati Bhawan Publishers & Distributors, New Delhi, 2008.

REFERENCE BOOKS

- 1. Michael Nelkon, Philip Parker, Advanced Level Physics, 7th Edition, CBS Publishers, India, 1995
- 2. D.Young Hugh, A. Freedman Roger, University Physics with Modern Physics, 14th Edition, Pearson Education, India, 2017.
